SUMMARY

AI Engineer with hands-on experience in shipping agentic **LLM**-integrated systems, tool-calling agents, MCP-based pipelines, and WhatsApp workflow automation shipped in production during a full-stack internship at L&T Technology Services. UAE resident, available immediately.

EDUCATION

VIT University

Vellore, Tamil Nadu, India

B.Tech Computer Science and Engineering, Specialization in Bioinformatics (CGPA: 7.1)

2022 – 2026

GEMS Our Own Indian School (CBSE)

Dubai, UAE

Class XII Senior School, Science Stream (75%)

2020 – 2022

EXPERIENCE

Full Stack Developer Intern

Feb 2026 – June 2026

L&T Technology Services (LTTS)

Chennai, India

- Delivered a production proctored assessment and recruitment platform – built solo (Angular 19 + Node.js + MongoDB Atlas), now used internally by LTTS recruiters with zero-downtime CI/CD via GitHub Actions on Render across Agile sprints; eliminated manual screening by an estimated 95% via bulk CV upload, ATS scoring with auto-fix, weighted candidate-JD matching, and a 360° evaluation dashboard.
- Shipped **LIPM** (Live Interview Proctoring & Mentoring): a full live video interview platform on LiveKit (WebRTC) with Deepgram Nova-2 real-time transcription, a 15-second AI Whisper Coach loop feeding interviewers live follow-up prompts, and a post-session hiring report (Groq llama-3.3-70b) with red-flag extraction; built a transcript-only speech-analytics engine deriving filler-word rate, pace (WPM), pause patterns, and a composite 0–100 confidence score, no audio signal processing required.
- Embedded **LTTS Copilot**: a tool-calling LLM agent (Groq llama-3.3-70b-versatile) as a floating admin chatbot with a scoped function-calling registry (active JD list, test pass rates, interview windows, resume analysis via PDF extraction); deliberately prompt-engineered tool-trigger constraints to eliminate hallucinated calls.
- Achieved 90% gaze and 95% multiple-face detection accuracy at <50ms latency by integrating **MediaPipe Face Landmarker** (solvePnP head-pose) and **face-api.js**; improved proctoring fairness post-launch by removing false-positive-heavy detectors (COCO-SSD, blink-rate, ambient-light) and retaining 8 high-signal violation types with a 3-strike cooldown and auto-submit at threshold.
- Unblocked the team's path to enterprise scale by designing an **MCP-based AI code-review pipeline** Python connectors for GitHub, GitLab, Jira, Confluence, and Jama feed Claude-powered cross-referenced reviews; live demo caught 5 critical security issues (RCE via `eval()`, 4 SQL injection vectors, MD5 hashing) and 6 AC failures pre-merge in under 10 seconds.
- Gave management a clear scaling path by driving a cloud-migration plan from free tier to **Azure** (Cosmos DB MongoDB API, App Service, Blob Storage, Azure OpenAI); delivered access checklist and migration runbook adopted by the team.
- Unblocked production repeatedly by diagnosing root-cause issues across the stack: bcrypt/bcryptjs auth conflict, Mongoose embedded-vs-referenced schema mismatch, JWT payload corruption, Angular 19 standalone-component conflicts, and CORS/env-var misconfiguration on Render.

PROJECTS

LTTS Test Management & Live Interview Proctoring Portal | *Angular 19, Node.js, Express.js, LiveKit, Deepgram, Groq, MediaPipe, JWT*

Feb – June 2026

- Automated the full recruiter workflow — JD upload triggers AI test generation, CV scoring, candidate ranking, and interview scheduling with access-coded shareable links; replaced Zoom + manual notes with a single browser tab: live proctored video (LiveKit), real-time transcription (Deepgram), and an auto-generated hiring report with structured scorecard and red-flag extraction.
- Live Demo:** [Watch Walkthrough \(9 min\)](#) → **Repo:** [github/test-management](https://github.com/taaqib/test-management)

- Multi-source AI code reviewer built on MCP: Python connectors for GitHub/GitLab (PR diffs), Jira (acceptance criteria), Confluence (design specs), and Jama (formal requirements) feed Claude/Copilot for cross-referenced reviews that cite exact ticket clauses and spec violations and not just code-level correctness.
- Live demo caught 5 critical security issues (RCE via `eval()`, 4 SQL injection vectors, MD5 hashing) and 6 AC failures pre-merge in <10 seconds; auto-posted review as a GitHub PR comment.
- Eliminated fragmented manual code reviews across 6 enterprise tools — previously developers context-switched between Jira, Jama, Confluence, GitLab, and GitHub with no traceability link between code changes and acceptance criteria; the pipeline surfaces exact spec violations and ticket clause breaches in a single auto-posted PR comment under 10 seconds.
- → **Repo:** [github/agent](#)

- Solved the retail trader's core problem — no risk discipline and no automation — by building a systematic pipeline that forecasts prices (ARIMA + LightGBM ensemble, 52 features) and enforces 10+ risk rules (2% max-risk sizing, ATR stops, regime gates, earnings blackout) with every rule walk-forward validated before going live.
- Eliminated daily manual market monitoring: GitHub Actions runs the pipeline on schedule, FinBERT ingests news sentiment, and a Telegram bot delivers plain-English trade signals with SHAP + Groq AI reasoning per signal — no manual intervention required.
- Closed the loop from signal to execution via Zerodha GTT order generation and a paper-trade simulator with mark-to-market P&L; MLflow tracks every experiment end-to-end.
- → **Live Dashboard:** [stocks-proj.netlify.app](#) → **Repo:** [github/stock-market-forecasting](#)

- Production-grade multi-tenant SaaS for UAE salons: bilingual EN/AR service catalogs, real-time slot scheduling, staff commission tracking, loyalty points, and WhatsApp/email notifications via Twilio and SendGrid.
- Containerized with Docker, orchestrated via Kubernetes manifests, provisioned with Terraform; Nginx reverse proxy for load balancing; Redis + BullMQ async job queues; Supabase (PostgreSQL) for auth and storage; Stripe and Square POS for UAE VAT-compliant payments.
- → **Repo:** [github/salon-booking-saas](#)

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, SQL, HTML5, CSS3

Frontend: Angular 18/19 (standalone components, RxJS), React, Vite, Angular Material, Tailwind CSS (RTL)

Backend: Node.js, Express.js, REST APIs, JWT auth, bcrypt, Multer, BullMQ

Databases: MongoDB / Mongoose ODM, MongoDB Atlas, PostgreSQL (Supabase), Redis

AI / LLMs: Anthropic Claude, Groq (LLaMA 3.1 / 3.3), prompt engineering, function-calling agents, RAG, MCP tooling, WhatsApp Business API, MediaPipe, LiveKit (WebRTC), Deepgram Nova-2

ML & Data: LightGBM, ARIMA, LSTM, scikit-learn, SHAP, FinBERT, MLflow, Pandas, NumPy

Cloud & DevOps: Docker, Kubernetes, Terraform, Nginx, Render, Vercel, Cloudinary, GitHub Actions (CI/CD), Azure (Cosmos DB, App Service, Blob Storage, OpenAI)

Tools: Git / GitHub, Postman, VS Code, Cursor, Stripe, Supabase, Zerodha Kite Connect, Telegram Bot API

CERTIFICATIONS

- AWS Certified Cloud Practitioner (in progress)
- Oracle Generative AI Foundations

ADDITIONAL INFORMATION

Languages: English (Fluent), Hindi (Fluent), Urdu (Fluent), Tamil (Fluent), Malayalam (Basic), Arabic (Basic)

Residency: Dubai, UAE

Driving License: UAE (Dubai) and India
